

ABSTRACT OF THE DISCLOSURE

An antenna unit and a radio communication terminal using this antenna unit, in which the sensitivity in radio wave transmission and reception is increased, are provided. The antenna unit provides a
5 coil of small diameter, a coil of large diameter, and a case that covers the coil of small diameter and the coil of large diameter. The case has one or plural opening parts within the range keeping the durability of the case. And the radio communication terminal uses this antenna unit.
